A Line Graph to Show $\qquad$

1) This line graph shows how far a class walked over half an hour, in metres. Add a title and label the axes.
2) Use the graph to complete the table.

| Time in Minutes | Distance in Metres |
| :--- | :--- |
| 5 |  |
| 10 |  |
|  |  |
| 20 |  |
|  |  |
| 30 |  |

| Time of Day | Temperature |
| :--- | :--- |
| 11 a.m. | $12^{\circ} \mathrm{C}$ |
| 12 noon | $17^{\circ} \mathrm{C}$ |
| 1 p.m. | $18^{\circ} \mathrm{C}$ |
| 2 p.m. | $21^{\circ} \mathrm{C}$ |
| 3 p.m. | $22^{\circ} \mathrm{C}$ |
| 4 p.m. | $22^{\circ} \mathrm{C}$ |

1) Use this chart showing the temperature during a day out to draw your own line graph.
2) Use your line graph to find the following information.
a) Estimate the temperature at 2:30 p.m.
b) What time did the temperature stop increasing? $\qquad$
c) What type of data is the temperature? $\qquad$
d) Will your line graph start at $0^{\circ} \mathrm{C}$ ? $\qquad$

Explain why. $\qquad$
$\qquad$ _

Number of People in the Park in a Morning
3) Is there a better way of displaying this data to avoid a mistake like this one?
$\qquad$
$\qquad$
4) Will said, "I know that only 1 person arrived at the park between 8 a.m. and 9 a.m." Is he correct? What other explanations for the change in number of visitors are there?
$\qquad$
$\qquad$
