

Addition and Subtraction 2

1) Solve the calculation without using the column method. Describe how you did it.

$$2015 - 1939$$

$$568 + 2014$$

2) Solve using the column method for addition.

Estimate and then check.

$$9876 + 824$$

$$2989 + 4156$$

$$234 + 2989$$

3) There were 5000 books for sale at a library fair. 2341 were sold on the first day and 1567 were sold on the second. How many books were sold in total?

How many books remained?

4) Solve using the column method for subtraction.

Estimate and then check.

$$5139 - 43$$

$$3215 - 804$$

$$6295 - 4379$$

5) There were 1689 entries into a competition in July. In August there were 345 more entries than there were in July. How many people entered the competition in August and July?
